

Questions to Ask Your Doctor

About a Diagnosis of Cocci

Given my travel/residence history and my symptoms, could this be Valley Fever?

What test will you order to check for Valley Fever?

How is the test performed? Is it a blood draw?

Will you do any imaging?

Is there any reason to do any more invasive testing?

What does the test measure?

How soon will the results get back?

How will the results be given to me (will you call me personally)?

Will I require any additional testing?

If the test is positive, will you refer me or treat me?
